Our Goal

Reduce customer churn and maximize customer lifetime value through targeted strategies and data-driven decisions.

Business Insights & Recommendation

Gold Churn Rate

9.86%

Revenue at Risk

\$287.138

Churn Rate

8.94%

Retention Rate

91.06%

High revenue, high churn

Free membership customers generate the highest revenue but also experience the highest churn.

Business impact

Loss of repeat purchases and future revenue potential due to high churn in a large customer base.

Recommendation

Improve onboarding experience and introduce loyalty rewards and personalized offers to increase retention.

Hidden revenue risk in gold members

Gold membership customers have churn levels greater than free members despite contributing significant revenue.

Business impact

Losing high-value customers leads to significant revenue leakage.

Recommendation

Provide exclusive benefits, early access, and personalized engagement to retain gold customers.

90-day inactivity rule

Customers inactive for more than 90 days show a substantially higher probability of churn.

Business impact

Delayed engagement increases the chances of permanent customer loss.

Recommendation

Launch automated re-engagement campaigns before 90 days of inactivity.

High-risk customer profile identified

Customers from the USA, aged 45–54, female, and acquired through organic search have higher churn.

Business impact

These segments contribute to a large portion of churn and lost revenue.

Recommendation

Run targeted retention campaigns and personalized offers for these high-risk segments.

Priority Actions

Retain free & gold members

Prevent 90-day inactivity

Target high-risk segments

Personalize marketing campaigns

Improve customer experience
