

Customer Churn Analytics Dashboard Guide

Executive Summary

Provides an overall view of business performance through KPIs such as Total Customers, Total Orders, Total Revenue, Churn Rate, Retention Rate and Average Order Value. Includes revenue trends, category performance, country analysis and acquisition channel performance.

Customer Analysis

Analyzes customer demographics including country, gender, age group, membership tier and acquisition channel. Helps understand customer distribution and repeat customer behavior.

Sales Analysis

Evaluates product category performance, revenue, return rate, active revenue and revenue at risk. Highlights high-performing and low-performing categories.

Churn Analysis

Focuses on churned customers by membership, country, age group and inactivity. Identifies high-risk customer segments for retention campaigns.

Business Recommendations

Summarizes the most important findings and suggests actions such as loyalty programs, personalized offers, re-engagement campaigns for inactive customers and monitoring high-risk segments.

Interactive Features

The dashboard includes slicers for country, membership tier, acquisition channel and date, enabling users to perform interactive analysis.
