

Customer Churn Analytics - Business Insights

1. High Revenue Categories

Electronics and other top-performing categories contribute a significant share of total revenue. These categories should remain a priority for inventory planning and promotional campaigns.

2. Customer Churn

Customers inactive for more than 90 days represent the highest churn risk. Early engagement campaigns before this threshold can improve retention.

3. Membership Analysis

Gold membership customers contribute strong revenue but also experience relatively high churn, indicating an opportunity for loyalty and retention initiatives.

4. Customer Acquisition

Organic Search is a major customer acquisition channel. Continued investment in SEO and digital marketing can help sustain customer growth.

5. Revenue at Risk

Revenue generated by churned customers highlights the financial impact of customer loss. Monitoring this KPI helps prioritize retention efforts.

6. Customer Segmentation

Analyze churn by country, age group, gender, and membership tier to identify high-risk customer segments and personalize retention campaigns.

Recommendations

Introduce loyalty rewards, personalized discounts, re-engagement emails for inactive customers, and continuous monitoring of churn-related KPIs through Power BI dashboards.
